

PUBLIC HEALTH INFO GAP

Many people **lack access to accurate and understandable health information**, leading to misinformation, delayed care, and poor health practices.

WHAT IS PUBLIC HEALTH?

Public health focuses on protecting and improving the health of entire populations—ranging from small communities to entire countries. It emphasizes prevention, healthy lifestyles, and responding to health threats

BARRIERS

Lack of accesible infomation

Health literacy gaps

Misinformation

Digital divide

EXTERNAL CAUSES

Technology

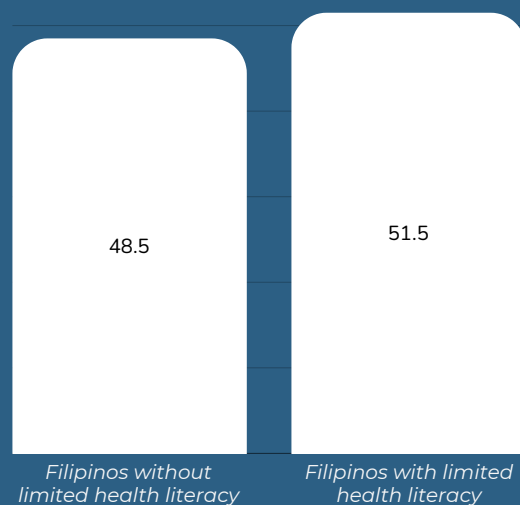

Socioeconomic Status

Information environment

Health System

IMPACT

1. *Delayed healthcare-seeking*
2. *Unsafe health practices*
3. *Vaccine hesitancy*
4. *Poor health decisions*
5. *Mistrust in health authorities*
6. *Poorer health outcomes*

Although 90% of Filipinos were basically literate in 2024, a national health-literacy survey found that 51.5% had limited health literacy

SOLUTION

Telehealth is a way to receive healthcare services remotely through electronic devices like your computer, tablet, or smartphone.

Telehealth is particularly relevant to the Philippines because geographic distance can make healthcare access difficult, especially for people in geographically isolated or underserved communities.
